BIO

Behind the Nukleall project there is Ale Mistretta, Italian psytrance artist and label manager of Blacklite Records. Nukleall has always been involved in electronic and rock music, frequently moving in alternative directions and searching continuously experimental sounds and projects. Since his first Live Act in 2008, Nukleall started to push more his music career, totally committing himself to his artistic life. After the creation of Looney Moon in 2004 with Dj Fog and Phobos and the experience of the whole music industry and scene, he departed from the the Looney project due to different artistic visions and decided to found his own Label, Blacklite Records. Along the years, Nukleall managed to build up a strong reputation in the psytrance scene and his Label has grown enough to keep him committed and to make out of Blacklite his project for life. He had already the chance to play in some of the best parties and festivals in the world and he is constantly working in new environments that can positively affect his music, projects and art. Nukleall's style has been defined as morning psytrance music with a fat and groovy dancing vein, tightly balanced with a strong whirling and psychedelic atmosphere. His first solo album "Hundreds of years Into the Future" has been released in November 2012 under Blacklite Records and from that moment, his artistic flow never stopped, bringing to light some of the most powerful productions on the worldwide Psytrance scene.
